(RESS)

***RESS is a core strand across all 5 years of the MBChB programme, aimed at providing medical students with the opportunity to acquire, develop, and apply research and evaluation skills.***

We can offer you teaching experience, publication potential, and the opportunity to work with motivated students.

Each year we need up to 30 supervisors for the Special Studies Projects (SSP) in years 1 to 3, and over 150 for the Extended Student-led Research or Evaluation Project (ESREP) across years 4 and 5.

P.T.O

## Some comments from previous RESS supervisors:

"[The best aspect of RESS 2-3] was the opportunity to design, develop and run the [project], seeing and reading the growing interest and ideas generated by the students"

"[The best aspect of the RESS 1 SSP was] meeting a well motivated group of young students and opening their eyes to how research impacts upon clinical practice"

"[ESREP] allowed me to address an area of work that would otherwise have been neglected"

Please contact the RESS Administrative Team If you would like:

- \* To teach research skills in the earlier stages of RESS
- \* To supervise an in-depth project in Years 4 & 5
- \* More general information about RESS
